

Assignment: Create a HTML based UI for the Test case Generator Langflow with own prompt implementing ICEPOT

Created .md file with system prompt to create a HTML page integrating the Test case generator Langflow:

```
1 Context: You are an AI agent that can develop Html UI for the given langFlow workflow.
2
3 Instructions:
4 Steps:
5 1. [MANDATORY]Create a fully Functional single page HTML UI for an AI Powered Test Case Generator.
6 2. [MANDATORY]Give the user friendly steps on how to use this generator
7 3. [MANDATORY]Give an option to copy and paste sample user story for an Manufacturing Domain
8 4. [MANDATORY]Implement clear option to clear the chat
9 5. [MANDATORY]Implement copy option to copy the output
10 6. [MANDATORY]Implement Export option to export the generated test cases in a csv file
11 7. [STRICT]The exported File should display the parsed test cases displaying each field in columns and each test
12 case displayed in rows with proper readable format
13 8. [CRITICAL]Embed the Langflow chat Interface for Testcase generation at top right with proper css styling and
14 also proper alignment
15 <script src="https://cdn.jsdelivr.net/npm/langflow-ai/langflow-embedded-chat/main/dist/build/static/js/bundle.min.
16 </script>
17 with host_url,flow_id and API Key
18 9. [CRITICAL]Implement only Langflow chat without any setting that is showing the icon to open the chat
19 10. [MANDATORY]Add proper scrolling options to scroll the chat
20 11. [MANDATORY]Use Yellow and Black as background theme
21
22 Example:
23 Sample Manufacturing Domain User Stories to include:
24 1. As a dealer, I want to Flash the latest software to the target ecm when a latest Flash File is available
25 2. As a customer, I want to view the ECM Details to understand what hardware part number and software part number
26 were installed
27
28 Output:
```

User prompt to generate the html file with step by step implementation asking for approval, used Claude Haiku as the Model:

CLAUDE CODE

← REVIEW MD FILE FOR APPROVAL

Go through the attached md file and perform step by step action seeking my approval

📄 `cutom-langflow-chat-agent-html.md`

Reviewed `cutom-langflow-chat-agent-html.md`

I'll read the attached markdown file to understand the requirements and then present them to you step by step for approval.

Reviewed `cutom-langflow-chat-agent-html.md`

Perfect! I've read the requirements. Here's a breakdown of the steps needed to complete this project:

The screenshot displays the 'AI Powered Test Case Generator' web application. The browser's address bar shows the URL: `C:\Users\handhvi\OneDrive\Desktop\GenAI-Assignments\customLangflowChat\test-case-generator.html`. The application has a purple header with the title 'AI Powered Test Case Generator' and a subtitle 'Generate comprehensive test cases for your code using langflow'. Below the header, there are two main sections: 'How to Use' and 'Example Manufacturing Domain Stories'. The 'How to Use' section lists five steps: 1. Select Sample Domain, 2. Copy a Basic Use Case, 3. Refine use case with the prompt, 4. Generate Test Cases, and 5. Review Output. The 'Example Manufacturing Domain Stories' section provides two sample use cases for a manufacturing domain. On the right side, there is a 'Chat' window with a blue header and a list of messages. The first message is a system prompt: 'Generate test cases for the use case, I want to find the correct software for the target ERM which is based from the 3 domains'. The second message is a user prompt: 'Based on the requirement, I will generate functional test cases for the manufacturing domain'. The third message is a system response: 'Test Case Generation The requirement is: 'No a detail I need to find the correct software to use target ERM which is based from the 3 domains''. The fourth message is a user prompt: 'Test Case is Available Use Case - Finding correct software for target ERM'. The fifth message is a system response: 'Based on ID 10, I will find Test Case Description. Finding correct software is target ERM which is based from the 3 domains the Request is: 'The target ERM is currently maintained and...'. At the bottom, there is a 'Generate Test Cases' button.

[illegible]

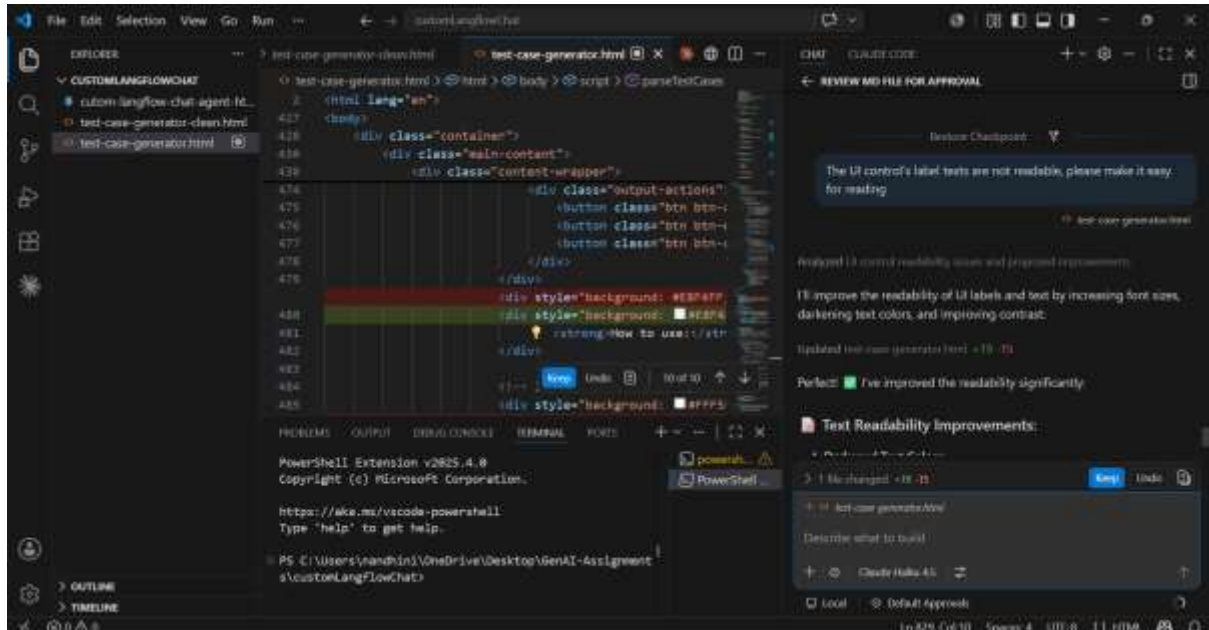

Added 3 test cases from the AI generated response and clicked on the “Export CSV” button, a csv file is exported successfully:

Exported the 3 test cases that are added:

Test Case ID	Test Case Name	Prerequisites	Steps	Expected Results
1	[7:30:20 PM] AI Generated Test Case: Test Case 1: Positive Test Case - Flashing latest software to target ECM Test Case ID: TC_ECM_01 Test Case Description: Flashing latest software to target ECM when a latest flash file is available Pre-Requisite: The target ECM is properly connected and configured The latest flash file is available on the server The dealer has the necessary permissions to perform the flashing action		Log in to the ECM flashing application as a dealer Select the target ECM from the list of available ECMs Check for the latest flash file availability on the server If the latest flash file is available, initiate the flashing process The flashing process should complete successfully, and the ECM should be updated with the latest software.	Test Case P
2	[7:30:47 PM] AI Generated Test Case: Test Case 2: Negative Test Case - Flashing without latest software Test Case ID: TC_ECM_02 Test Case Description: Flashing ECM without the latest software Pre-Requisite: The target ECM is properly connected and configured An older flash file is available on the server The dealer has the necessary permissions to perform the flashing action		Log in to the ECM flashing application as a dealer Select the target ECM from the list of available ECMs Check for the flash file availability on the server If an older flash file is available, initiate the flashing process The flashing process should fail or display a warning message indicating that the flash file is not the latest.	Test Case P
3	[7:30:57 PM] AI Generated Test Case: Test Case 3: Edge Case - Flashing with no available flash file Test Case ID: TC_ECM_03 Test Case Description: Flashing ECM with no available flash file Pre-Requisite: The target ECM is properly connected and configured No flash file is available on the server The dealer has the necessary permissions to perform the flashing action		Log in to the ECM flashing application as a dealer Select the target ECM from the list of available ECMs Check for the flash file availability on the server If no flash file is available, attempt to initiate the flashing process The flashing process should fail or display an error message indicating that no flash file is available.	Test Case P

Also, tried to customize the UI look and feel to make more readable:

The output after customization (Though instructed 2-3 to get the desired output):
